Liquid drainer (Grey cast iron, Forged steel)

Fig. 665....1 with flanges

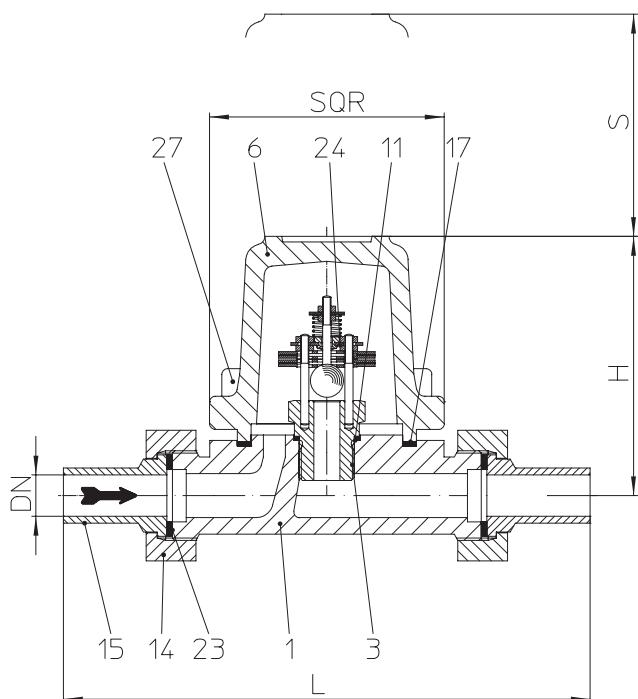

Fig. 665.... Union with butt weld ends (only PN16)

- Automatic condensate-discharge during start-up and shut down
- On unpressurized system the liquid drainer will be opened by a compression spring inside of the controller
- On factory setting the liquid drainer will be closed at a differential pressure of $\geq 1,5$ bar. Other factory settings between 0,5 bar and 2 bar possible.
- Bimetallic elements will achieve that the closing pressure is constant
- Installation in any position
(if a frost resistant execution is required please inquire)

Capacity chart

The capacity chart shows the maximum flow quantities of cold condensate at about 20°C.

Selection criteria:

- Closing pressure
- Nominal diameter / pressure
- Type of connection
- Material
- Place of service

Example for order data:

 For the condensate discharge from a steam pipe, $\Delta P=3$ bar, max. flow 700 kg/h, flange connection, PN16, DN25

=> Liquid drainer, Fig. 665, PN16, DN25, EN-JL1040, Face-to-face dimension 160 mm, with flanges

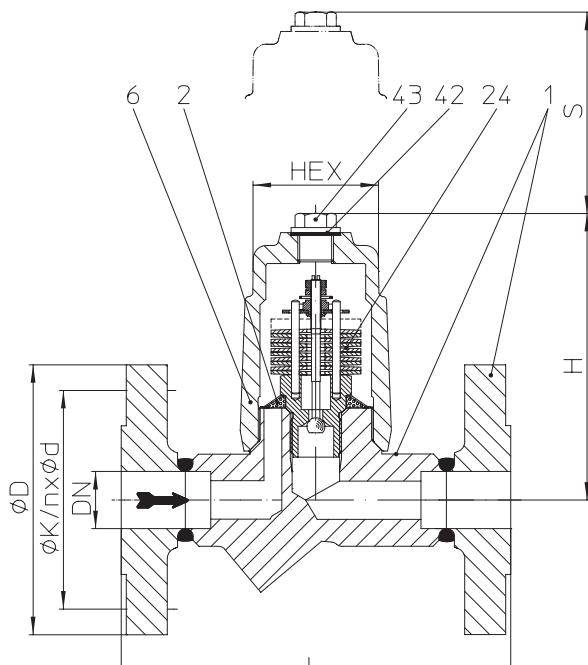

Condensate discharge temperature limiter (Forged steel)

Fig. 645....1 with flanges

- Steam trap for the discharge of condensate without re-evaporation at adjustable condensate temperatures (temperature range from 60°C up to 140°C).
- With corrosion- and waterhammer resistant bimetallic controller
- Automatic air-venting during start-up and operation of the installation
- Installation in any position, except cap upside down
- Integrated non return protection
- With inside strainer - Fig. 645
With outside strainer - Fig. 647 (Y)
- Subcooling of condensate is continuously adjustable (observe the operation instructions)
- The exchange of the controller is possible without disturbing the pipe connections
- For the utilization in warm water and hot water plants
- Options:
 - with blow down valve (Pos. 46)
 - with thermometer insert (Pos. 47 and 48)
(only with inside strainer)

Capacity chart

The capacity chart shows the maximum flow quantities of cold condensate at about 20°C and condensate at 10K below the opening temperature based on the factory setting.

Options:

Outside strainer with blow down valve (Fig. 648)

Options:

Thermometer insert with adapter
(Indicating range: 0°C up to 160°C) standard,
(up to 250°C on request)

Selection criteria:

- Inlet press.
- Back pressure
- quantity of condensate
- Nominal diameter / pressure
- Type of connection
- Material
- Options

Example for order data:

For the condensate discharge from a steam pipe, Operating pressure P1=4 bar(g), max. flow 50 kg/h, opening temperature 80 °C, flange connection, PN40, DN25

=> Condensate discharge temperature limiter, Fig. 647, PN40, DN25, 1.0460, Face-to-face dimension 160 mm, flange connection, with thermometer.

Return temperature limiter (Forged steel)

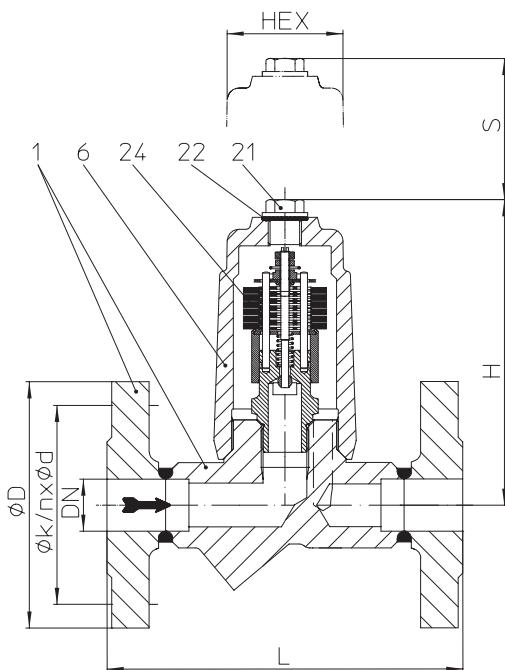

Fig. 650....1 with flanges

Liquid return temperature limiter is applied for the return of hot water or other suitable liquids in heating systems.

Temperature guided but operating from the pressure, it is providing a consumption oriented supply of hot water to heating systems.

Energy saving by using reduced flow return temperatures.

- With corrosion- and waterhammer resistant bimetallic controller
- The controller has a stroke-limitation at 130 °C thus even in case of an incorrect setting the function is performed
- Scope range of closing temperature from: 60° to 130 °C
- The exchange of the controller is possible without disturbing the pipe connections
- Optimized design for quick installation
- Maintenance simplified due to screwed cap without sealing
- Installation: horizontal installation position is preferred, inclined installation position of the screwed cap is possible
- Options:
 - with thermometer insert (pos. 47 and 48)
 - with external adjustment device (pos. 44) and extended setting range, with factory setting at 180°C

Operating limits

Fig. 44. / 45.650	PN25 / 40 - 1.0460
Operating pressure PS (bar-g)	22
Operating temperature TS (°C)	180

Capacity chart

The capacity chart shows the maximum capacity at factory setting (90°C).

The water-temperature determines the degree of opening of the controller. The lower temperature of the water the higher the flow quantity.

Change of the factory setting

After opening the cap in pressureless mode, an adjustment of the closing temperature can be done. A half turn of the screw clockwise results in an increase of temperature by about 10K.

Option:

 Option: Thermometer insert with adapter
 (Indicating range: 0°C up to 160°C) standard,
 (up to 250°C on request)

Option:

External adjustment device

Selection criteria:

- Closing pressure
- Operating pressure
- Back pressure/Differential pressure
- Flow quantity
- Upstream temperature
- Required closing temperature
- Nominal diameter / pressure
- Type of connection
- Material

Example for order data:

Return temperature limitation for a pipe tracing system., Inlet press. 4 bar(Ü), closing temperature 90°C, flange connection, PN40, DN15, 1.0460, Face-to-face dimension 150 mm.

=> Return temperature limiter, Fig. 650, PN40, DN15, 1.0460, Face-to-face dimension 150 mm, T = 90°C, flange connection

Return temperature limiter (Forged steel)

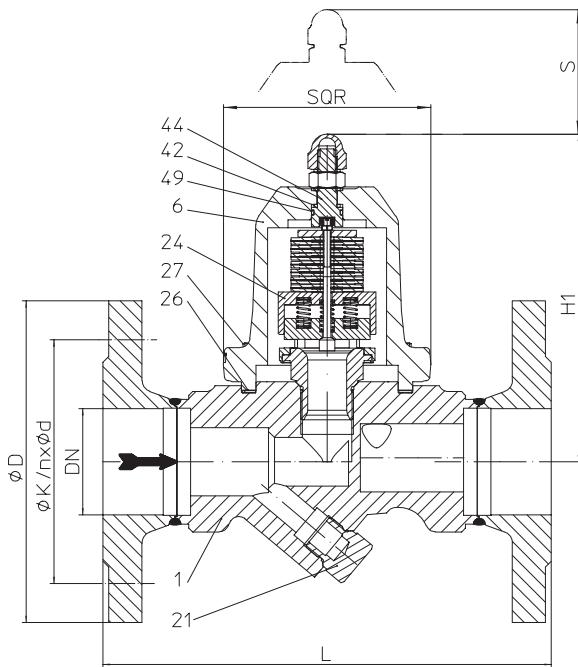

Fig. 650....1 with flanges

Liquid return temperature limiter is applied for the return of hot water or other suitable liquids in heating systems.

Temperature guided but operating from the pressure, it is providing a consumption oriented supply of hot water to heating systems.

Energy saving by using reduced flow return temperatures.

- With corrosion- and waterhammer resistant bimetallic controller

28	Hexagon nut	5		A4-70

* Spare part (Pos. 4, 12, 13 will be supplied as unit)

Information / restriction of technical rules need to be observed!

Operating instructions can be ordered by phone +49 (0)5207 / 994-0 or fax +49 (0)5207 / 994-158 or -159.

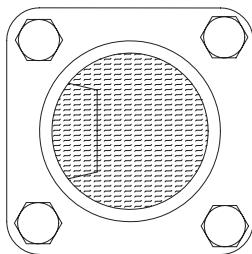

Flow conditions through a sight glass installed in front of a steam trap

Figure 1: Back pressure of condensate

On a back pressure of condensate the interior space will be filled with liquid..

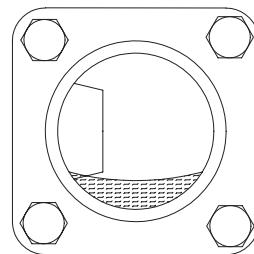

Figure 2: Steam flow

On steam flow the liquid level is lowered below the edge of the inlet pipe. Intensive mixture of water and steam can lead to an intensive bubbling.

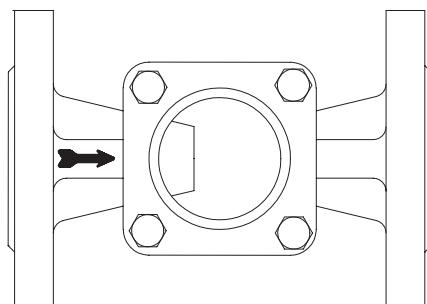

Figure 3: Tetragonal top flange (< DN 65)

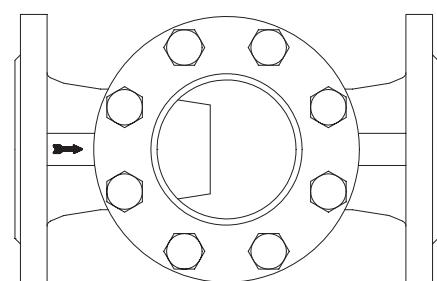

Figure 4: Circular top flange (DN65-250)

Selection criteria:

- Operating pressure
- Operating temperature
- Nominal diameter / pressure
- Type of connection
- Body-Material

Example for order data:

For monitoring the function of steam traps in pipe work systems, PS= 22 bar, TS = 250 °C, screwed socket G 1/2, body of stainless steel, window borosilicate glass DIN 7080-16.

=> Flow indicator, Fig. 660, G 1/2, PN16, Stainless steel, Face-to-face dimension 100 mm, Screwed sockets.

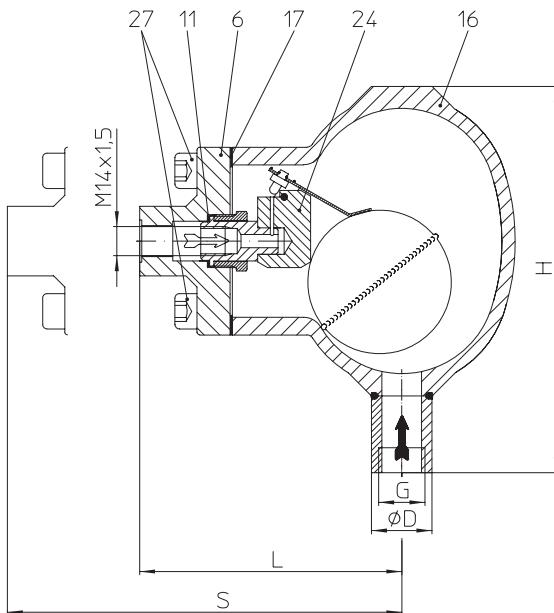

Automatic air vent for liquid systems (SG iron, Cast steel, Stainless steel)

Fig. 656...2 (PN16) with screwed sockets

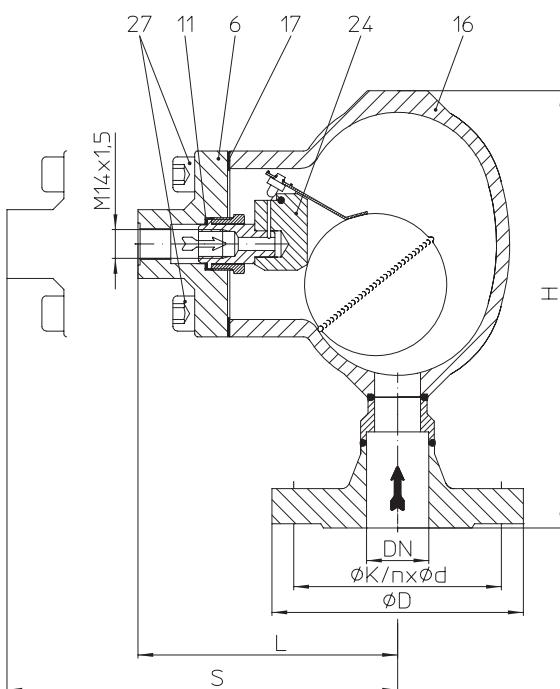

Fig. 656... with Flange

- Automatic air vents for liquid systems
- Hood with flanged cover
- The exchange of the controller is possible without disturbing the pipe connections
- Installation: above the point being vented, inlet always at the bottom
- Options:
 - Drip pipe (Pos. 54)
with Union M14x1,5 for pipe-ø 8 mm (Pos. 53)

Operating limits

Fig. 22.656	PN16 - EN-JS1049
Operating pressure PS (bar-g)	14
Operating temperature TS (°C)	300

allowable differential pressure ΔPMX (bar):	14
for controller:	R14

Fig. 34.656	PN25 - 1.0619+N
Operating pressure PS (bar-g)	21
Operating temperature TS (°C)	225

allowable differential pressure ΔPMX (bar):	21
for controller:	R21

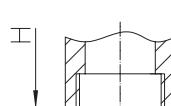

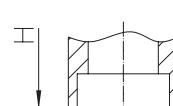

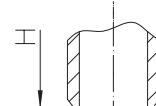

Fig. 54.656	PN25 - 1.4308
Operating pressure PS (bar-g)	21
Operating temperature TS (°C)	300

allowable differential pressure ΔPMX (bar):	21
for controller:	R21

Types of connection

Inlet:	
Flange1	DIN PN25
Screwed sockets2	Rp- and NPT-thread acc. to DIN EN 10226-1 (bei PN16 - EN-JS1049 only Rp 1/2")
Socket weld ends3	acc. to DIN EN 12760
Butt weld ends4	acc. to DIN EN 12627
Outlet:	
M14 x 1,5 DIN 13	

Other types of connection on request.

Information / restriction of technical rules need to be observed!

Operating instructions can be ordered by phone +49 (0)5207 / 994-0 or fax +49 (0)5207 / 994-158 or -159.

Capacity chart

Options

The diagram shows the maximum discharge of air at standard condition.

Drip pipe (angle) with union joint

For higher performance with mounted vacuum breaker (BR655)

with connector and vacuumbreaker (BR655)

The diagram shows the maximum discharge of air at standard condition with mounted vacuumbreaker.

Vacuum breaker (Stainless steel)

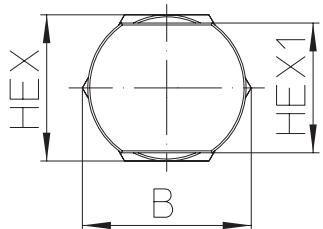

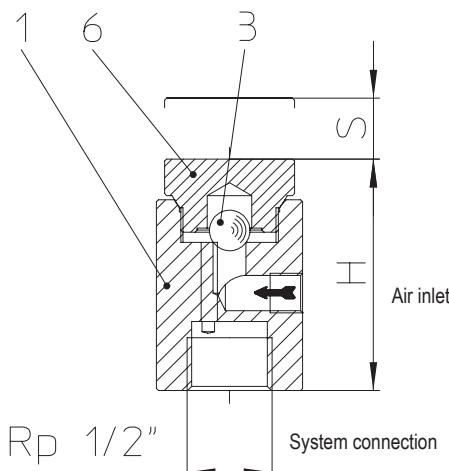

Fig. 655....2 with screwed sockets

- Ventilation valve for pipelines, condensing vapour (steam) or liquid systems, where the system pressure should not fall below the atmospheric pressure.
- Vertical position, cap on top.
- System connection downwards.

Operating limits

Fig. 55.655	PN40 - 1.4301	
Operating pressure PS (bar-g)	13	21
Operating temperature TS (°C)	400	220

Types of connection

System connection2	Rp 1/2 (acc. to DIN EN10226-1)
Air inlet	Rp 1/8 (acc. to DIN EN10226-1)

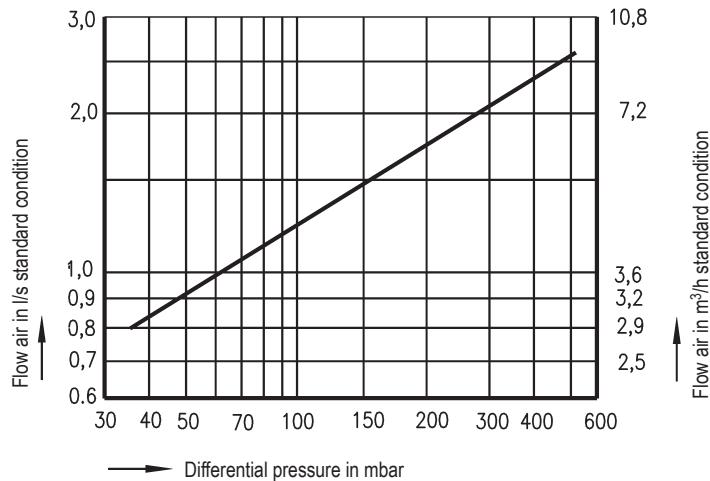

A dropping line can be connected.

The line has to be led to an outlet.

Technical data

Set pressure:	7 mbar
Kvs-value:	0,55 m³/h

Capacity chart

The diagram shows the maximum discharge of air at standard condition.

Informations about pipe welding
Welding groove acc. to DIN 2559

The material used for ARI valves with butt weld ends are:

1.0619+N	GP240GH+N acc. to DIN EN 10213-2
1.0460	P250GH acc. to DIN EN 10222-2
1.0401	C15 acc. to DIN 17210
1.4408	GX5CrNiMo19-11-2 acc. to DIN EN 10213-4

Due to our experience, we recommend to apply an electric welding process.

Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop.

On bimetallic steam traps face-to-face of 95 mm or less, the bimetallic controller has to be disassembled prior to welding. After the traps have cooled down to the ambient temperature the bimetallic controller shall be fitted again into the body.

Steam traps with socket-weld ends shall only be welded by arc welding (welding process 111 acc. to DIN EN 24063).

If during the time of warranty others than the manufacturer or by the manufacturer authorized persons are interfering in the product and/or the setting, the right of claim for warranty will lapse!
